**REV: 2** 

# 1. General Requirements

This power supply is designed for entry server computer systems. There are five DC outputs: +5V, +12V, -12V, +3.3V & +5VSB and it will provide power to all system components.

# 2. Input Requirements

# 2.1 Harmonics

The power supply shall incorporate universal power input active power factor correction, which shall reduce line harmonics in accordance with the EN61000-3-2 and JEIDA MITI standards.

# 2.2 AC Inlet Connector

The AC input connector shall be an IEC 320 C-14 power inlet.

# 2.3 AC Input Voltage Specification

The power supply must operate within all specified limits over the following input voltage range. Harmonic distortion of up to 10% THD must not cause the power supply to go out of specified limits.

| Parameter        | Min.     | Nom.          | Max. | Unit |  |
|------------------|----------|---------------|------|------|--|
| Vin (Full range) | 90-103   | 103-220       | 264  | Vrms |  |
| Vin Frequency    |          | Hz            |      |      |  |
| Full Load        | 80%      | 80% 100% 100% |      |      |  |
| AC Current       | 6-3 Arms |               |      |      |  |

# AC Input Rating

Note: Power factor correction (PFC) >0.95 at full load.

#### 2.4 AC Inrush Current

Maximum inrush current from power-on (with power on at any point on the AC sine) and including, but not limited to, three line cycles, shall be limited to a level below the surge rating of the input line cord, AC switch if present, bridge rectifier, fuse, and EMI filter components. Repetitive ON/OFF cycling of the AC input voltage should not damage the power supply or cause the input fuse to blow. 3. DC Output

# 3. DC Output

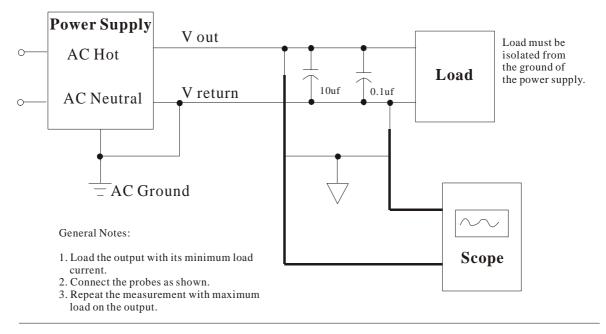

# 3.1 Voltage /Current

# FLX-300W SPECIFICATION

| Output     | Minimum | Maximum | Load | Cross | Line | Ripple &   |
|------------|---------|---------|------|-------|------|------------|
| Voltage    | Load    | Load    | Reg. | Reg.  | Reg. | Noise      |
| +3.3V      | 0.1A    | 15A     | ±5%  | ±5%   | ±1%  | 50mV p.p   |
| +5V        | 0.2A    | 15A     | ±5%  | ±5%   | ±1%  | 50 mV p.p  |
| +12V       | 0.6A    | 22A     | ±5%  | ±5%   | ±1%  | 120 mV p.p |
| -12V       | 0A      | 0.3A    | ±10% | ±10%  | ±1%  | 120 mV p.p |
| $+5V_{SB}$ | 0A      | 2A      | ±5%  | ±5%   | ±1%  | 50mV p.p   |

Note:

- A. Maximum continuous total DC output power should not exceed 300W.
- B. Peak total DC output power should not exceed 400W.
- C. Peak power and current loading shall be supported for a minimum of 10 seconds.
- D. Combined 3.3V and 5V power shall not exceed 80W.
- E. Ripple and noise measurements shall be made under all specified load conditions through a single pole low pass filter with 20MHz cutoff frequency. A 0.1uF ceramic disk capacitors in parallel with a 10uF tantalum are placed at the point of measurement. See Figure 1.

| Pin | Signal | Cable Color |
|-----|--------|-------------|
| 1   | +5VDC  | Red         |
| 2   | СОМ    | Black       |
| 3   | СОМ    | Black       |
| 4   | +12VDC | Yellow      |

### **3.2.6 Serial ATA Power Connector**

Connector housing: WST P/N: P5-I12702T00 or P5-I12702T00 or equivalent.

| Pin | Signal  | Cable Color |
|-----|---------|-------------|
| 1   | +3.3VDC | Orange      |
| 2   | СОМ     | Black       |
| 3   | +5VDC   | Red         |
| 4   | СОМ     | Black       |
| 5   | +12VDC  | Yellow      |

#### Pin and Cable Color Assignment

Note: Output cables may be different in designated model on the length, connector type and/or quantity.

# 3.3 Remote On/Off Control

The power supply DC outputs (with the exception of +5 VSB which is always available) are enabled with an active-low, TTL-compatible signal ("PS-ON"), When PS-ON is pulled to TTL low, the DC outputs are enabled. When PS-ON is pulled to TTL high or open-circuited, the DC outputs are disabled. PS-ON may be active by either electronic means or a mechanical switch.

# 3.4 Rise Time

The output voltage shall rise from 10% to within regulation limits within 0.1 to 25ms.

# 3.5 Overshoot at Turn-On/Turn-Off

The output voltage overshoot upon the application or removal of the input voltage under the conditions specified in section 2.3 shall less than 10% above the nominal voltage.

# 3.6 Hold-up Time

The power supply should maintain output regulations per Table1 despite a loss of input power at the low-end nominal range-115Vac / 47Hz or 230Vac / 47Hz - at maximum continuous output load as applicable for a minimum of 17ms.

# 3.7 Power Good Signal

A "power good" signal is asserted by the supply to indicate that the +5VDC output is within regulation limits.

| Signal Type:             | +5V TTL compatible                              |  |
|--------------------------|---|--|
| Logic level low:         | <0.4V while sinking 4mA                         |  |
| Logic level high:        | Between 2.4V and 5V output while sourcing 200µA |  |
| High state impedance:    | 1KΩ (from output to common)                     |  |
| POK delay:               | 100-500ms                                       |  |
| Power fall warning time: | 1ms minimum                                     |  |

Power Good Signal Characteristics:

# 4. Protection Circuits

# 4.1 Over Voltage Protection

The power supply over voltage protection shall be locally sensed. The power supply shall shutdown and latch off after an over voltage condition occurs. This latch shall be cleared by toggling the PSON# signal or by an AC power interruption. The below enclosed table contains over voltage limits. The values are measured at the output of the power supply's connector. The voltage shall never exceed the maximum levels when measured at the power pins of the power supply connector during any single

point of fail. The voltage shall never trip any lower than the minimum levels when measured at the power pins of the power supply connector.

| Output Voltage | MIN(V) | MAX(V) |
|----------------|--------|--------|
| +3.3V          | 3.76   | 4.3    |
| +5V            | 5.5    | 7.0    |
| +12V           | 13.4   | 15.6   |

# **4.2 Short Circuit Protection**

A short circuit on any DC output will cause the power to latch. The power supply will withstand a continuous short circuit to the output without damage or overseers to the unit. The +5VSB can be shorted indefinitely and will recover automatically when the short is removed.

# **4.3 Over Power Protection (OPP)**

The power supply shall go shutdown when the total output load is over 120-160% of rating.

#### **5** Physical Environment

#### **5.1 Operation Conditions**

The power supply shall be capable of continuous operation and meet all electrical specification without need for adjustment when subjected to the following environ-mental conditions:

|            | Temp. vs. Load Condition | Humidity  |
|------------|--------------------------|-----------|
| Oreanstian | 0~40°C@Full Load         |           |
| Operation  | 50°C@80% Rated Load      | 10%~90%RH |
| Storage    | -20°C~80°C               | 5%~90%RH  |

\* No degradation of the power supply shall occur during shipping or storage at the specified condition.

# **5.2 Shocks and Vibration**

The power supply will withstand the following imposed conditions without experiencing nonrecoverable failure or deviation form specified output characteristics.

# 6. Regulatory Compliance

#### **6.1 Safety Requirements**

# 6.2 Dielectric Strength

Primary to Secondary: 1500 VAC for 1~3 seconds.

Primary to Frame Ground: 1500 VAC for 1~3 seconds.

#### **6.3 Insulation Resistance**

Primary to Secondary: 20 Meg. ohm Minimum.

Primary to Frame Ground: 20 Meg. ohm Minimum.

#### 6.4 Ground Leakage Current

The power supply ground leakage current shall be less than 3.5mA.

The power supply grounding continuity shall be less than  $100m\Omega$  when the test current is at 25A.

# 7. Reliability

The power supply has a minimum predicted MTBF (MIL-STD-217E) of 100,000 hours of conditions operation at 25°C, maximum-output load, and nominal AC input voltage.
